

FOR IMMEDIATE RELEASE

First Green Certified Multi-Family Community in Florida
The Sage Is Now Selling Townhomes from \$170s

Winter Park, FL – Building green is no longer trendy. Developers and homebuyers alike are making conscious choices to be environmentally friendly. And, "going green" isn't a phenomenon limited to just high-end homebuyers. Buyers realize these elements will result in possible long-term savings and the end result is a growing market for "greener" homes.

Phase One of The Sage at Winter Park is expected to be the first, completed green certified multi-family project in the state of Florida. This community, located in Winter Park, will feature remarkably energy-efficient townhome-styled homes designed specifically to use less energy, less natural resources and fewer toxic chemicals while offering the opportunity to realize a lifetime of real savings. It features 2, 3 and 4 bedroom townhomes varying in size from 984 to 1,468 square feet and priced from the \$170s to \$300,000.

The homes will be certified ENERGY STAR as well as include ENERGY STAR features and appliances. According to The US Environmental Protection Agency, "an ENERGY STAR certified home is at least 20 percent to 30 percent more efficient than standard homes." ENERGY STAR is a third party organization that inspects finished units and awards the entire home a seal of approval. Homes that earn the ENERGY STAR label include four "must have" features behind the walls that will make you more comfortable, reduce utility bills and help protect the

environment. These “must have” features include air sealing and insulation that works, low E double pane windows, ducts that don’t leak and independent testing and inspections to ensure quality control.

Each home at The Sage is inspected on three separate occasions by an independent consultant to ensure that the rigorous standards of our green building practices have been met and the insulation and air barriers are properly installed. The Sage is partnering with industry leaders including Progress Energy, Teco Gas, ENERGY STAR, Florida Green Building Coalition (FGBC) and Brighthouse.

Some of the energy saving features you’ll find in each home at The Sage include gas stoves, tankless hot water heaters, low-flow showerheads and other water conserving fixtures, high-efficiency air conditioning, dedicated circuit for charging electric cars, insulation values exceeding code and dual flush toilets.

The Sage’s unmatched location just off Aloma Ave on N. Goldenrod Road provides convenient access to major roadways, Winter Park’s Park Avenue shops and restaurants, as well as the University of Central Florida and many major employers. As a green infill location The Sage also utilizes the unmatched amenities already in place like Goldenrod Park, Cady Way Trail’s 6.5 mile paved walking, jogging and biking trail and Lake Perch.

Interested homebuyers may call 407-951-8871 to arrange a private presentation or visit our website at www.TheSageAtWinterPark.com
